3. We are dependent upon few customers for our business. Any reduction or interruption in the business of a key customer or a substantial decrease in orders placed by a key customer may have an adverse impact on the revenues and operations of our Company

We are dependent on a few customers for our business. Our five largest customers accounted for about 92% of our total revenue for the period ended March 31, 2015. Our major customers include NRB Bearings Limited, SKF India Limited, Turbo Bearings Private Limited, Texspin Bearings Limited, NRB Industrial Bearings Limited, TIMKEN, National Engineering Industries Limited, Turbo Industries, INAPEX Pvt. Ltd., etc. We do not have long term arrangements with all our customers to purchase our products in the future, at the current prices or at all. The loss of a major customer and/or reduction in any of our key customers’ sales, resulting in lower demand for our products and any material delay, cancellation or reduction of orders from any of our key customers would materially affect our business and financial condition. There is no assurance that we will be able to maintain historic levels of business from all the existing customers or to retain all the existing customers, or that we will be able to replace our customer base in a timely manner or at all. In the event our existing customers do not continue to purchase our products, it may affect our revenues and the financial condition of our Company.

4. Our Company does not have any formal long-term arrangements with the suppliers and customers. Any significant variation in the supply & demand may adversely affect the operations and profitability of our Company

We do not have any formal long-term arrangements with our suppliers and customers which obliges them to maintain their business with us. Our ability to maintain close and satisfactory relationships with our suppliers & customers and to consistently provide processing services that meets customer’s requirements is important to our business. There is no assurance that these suppliers will continue to supply raw materials to us and these customers will continue to purchase products from us. This could impact the financial performance of our Company and affect our financial condition.

5. We have installed a windmill with capacity of 0.250MW at KotdaPitha in Amreli, Gujarat where turbine generators are used for generating wind energy for our captive use, however, these activities prior to May 11, 2015 were not covered under the object clause of our Memorandum of Association

In order to meet our power requirements, we installed a windmill with of capacity 0.250MW at KotdaPitha in Amreli, Gujarat. But inadvertently we did not amend our object clause suitably for insertion of the said business activities in Memorandum of Association. However in our Extra Ordinary General Meeting held on May 11, 2015 with the consent of members, we have suitably altered the furtherance of the Main Object clause to cover power generation activity and made requisite filings with ROC. We cannot assure you that no penal action will be taken against us by any statutory authority

6. Our Company imports majority of its basic raw materials viz alloy steel bars and wire rods from few suppliers and will continue to rely in the near future

Our Company import more than 50% of our basic raw material viz. alloy steel bars and wire rods from its suppliers i.e. ASCOINDUSTRIES SAS France and Dongbu Special Steel Co. Limited etc. Currently, we do not have any agreement with our raw material suppliers. While we believe that we can find additional vendors to supply raw materials, any failure of our existing supplier to deliver these raw materials in the desired quantities or to adhere to delivery schedules or specified quality standards and technical specifications would adversely affect our production schedule and our ability to

deliver orders on time and at the desired level of quality. This may have negative impact on our reputation, profitability and results of operations.

7. Exchange rate fluctuations may adversely affect the Company's financial performance

Since, we import more than 50% of our raw materials from our suppliers located in international markets, our Company is exposed to foreign exchange rate risks primarily in relation to the import of products. Accordingly, adverse movements in foreign exchange rates may increase procurement costs and adversely affect the Company's results of operations. While our Company has been hedging itself against the currency fluctuations in order to appropriately mitigate risks, which we believe is adequate to protect the Company from such fluctuations, there can be no assurance that the risks arising out of the same can be fully mitigated.

8. Our operations will have significant raw material requirements, and we may not be able to ensure the availability of the raw materials at competitive prices, which may adversely affect results of our operations

The success of our operations will depend on, inter-alia, our ability to source raw materials at competitive prices. Currently, we have not entered into any firm arrangement for purchase of our raw material. Historically, we have not encountered any problems in sourcing our raw materials. However, we cannot assure you about the same in future and that we may be unable to procure raw material in time or in the required quantities or may have to procure it at a higher price, which may adversely affect our results of operations and financial performance.

9. Increased cost of raw materials for inventory and, in particular, of steel may affect our business and results of operations

The principal raw materials used by us to manufacture taper, cylindrical and spherical rollers are wire rods and alloy steel bars. For further details, please refer "**Our Business** on page 83 of this Prospectus." The prices and supply of raw materials may depend on factors beyond our control, including economic conditions, exchange rates, competition, consumer demand, production levels, transportation costs and import duties. In the event that any of our suppliers of raw materials curtail, discontinue or delay their delivery of raw materials to us, we will be required to replace such suppliers. There can be no assurance that we will be able to replace such suppliers on commercially acceptable terms, or at all, which could adversely affect our production schedule, volumes and results of our operations. Further, if we are unable to pass such increased costs to our customers, this could have a material adverse effect on our financials, business and results of operations.

10. Our products are being manufactured from our sole manufacturing facility in Rajkot, Gujarat

We manufacture our products from our sole manufacturing facility in Rajkot, Gujarat, which substantially caters to our domestic demand and export commitments. Any disruption in the operations due to supply of power, fire outages or industrial accidents at this unit could hamper or delay our ability to continue production. While in the past we have not encountered any stoppages at this facility, any disruption or suspension in the production process in this facility can significantly impact our ability to service customer needs and relation with our customers and have a material adverse effect on our business, revenues, reputation, results of operation and financial condition.

11. Any shortage or non-availability of electricity may adversely affect our manufacturing processes and have an adverse impact on our results of operations and financial condition

Our manufacturing process requires a substantial amount of electricity and we depend mainly on state electricity supply for our power. Further, our Company also utilises electricity generated through its wind mill situate at Amreli, Gujarat for running its factory. While we have not in the past been affected by any major power interruptions, in the event the Company fails to produce the requisite power from its wind mill or there is disruption in the generation of electricity from our wind mill on account of any factor or there is disruption of power supply from the state electricity department, the same could result in an increase in the cost of power and disruption of our manufacturing process which may adversely affect our results of operations. Further, we are sub-lessees of the land from which our windmill is operating. In the event we are in breach of the terms of the sub lease or if the sub lessor is in breach of the head lease or if the lease/sub-lease does not get renewed then their may be distrupction in the supply of electricity and the same could result in an increase in the cost of power and distrupction of our manufacturing process which may adversely effect our results of operations.

12. Our revenues are significantly dependent upon sales of cylindrical and taper roller

Our core business is the manufacture of various types of finished cylindrical and taper roller and certain components of taper roller in India. Consequently, our income is significantly dependent on sales of taper roller manufactured by us and over the years, such sales have emerged the largest single contributor to our revenue and business. Our continued reliance on sales of taper roller for a significant portion of our revenue exposes us to risks, including the potential reduction in the demand for such bearings in the future; increased competition from domestic and international manufacturers; the invention of superior and cost-effective friction management technology; fluctuations in the price and availability of the raw materials; changes in regulations and import duties; and the cyclical nature of our customers' businesses. One or more such reasons may affect our revenues and income from sales of taper roller bearings and thereby adversely affect our business, profitability, cash flows and results of operations.

13. We may have certain Contingent Liabilities not provided for crystallization of any of these liabilities could affect our financials.

Our contingent liabilities as of 31st March 2015, not provided for (as disclosed in our financial statements are detailed in the following table.

There have been some instances of delayed filing by the Company in respect of the filings required to be made with regulatory authorities, including filings under Companies Act. Till date, the Company has not received any notices from any authorities, however, there can be no assurance that the regulator may not initiate proceedings against us or that we will be able to sufficiently defend against any action initiated by regulators in relation to regulatory compliances for all instances and periods. Any adverse order passed or penalty imposed by regulators on us may adversely affect our business and results of operations.

15. We derive majority of our income from our customers within India. Therefore, factors that adversely affect the demand for our products in India may adversely affect our business

We have in the past derived and believe that we will continue to derive, a significant portion of our income from our customers within India. In addition, all of our employees are based in India. Consequently, factors that adversely affect the Indian economy or the demand for our products within India, may adversely affect our business and profitability.

16. Trademark of our logo is not registered and we are in the process of seeking registration of trademark of our logo. There is no assurance that this application shall result in us being granted registration in a timely manner. Failure to protect our intellectual property may adversely affect our reputation, goodwill and business operations

Our corporate name and logo  has not been registered as a result of the same the use of the words "Vishal Bearings Limited" in the corporate and trading names by any third parties may lead consumers to confuse them with our Company and if they experience any negative publicity, it could have an adverse effect on our business, results of operations and financial condition. This confusion might also lead to our Company losing business to such competitors and might adversely affect our goodwill. However, we have applied for the registration of the trademark of our logo  vide an application no. 2995940 dated 29th June, 2015 under class 12 of the Trade Marks Act, 1999. Further, since it is not registered we do not enjoy the statutory protections accorded to a registered trademark and are subject to the various risks arising out of the same, including but not limited to infringement or passing off our name and logo by a third party. Maintaining the reputation of our brands, corporate name, logo and the goodwill associated with these trademarks is critical to our success. Substantial erosion in the value of our brand names could have a material adverse effect on our business, financial condition, results of operations and prospects. For further details please refer to section titled "Government and Other Approvals" on page no. 187 of this Prospectus.

17. Our success depends upon our Directors and the Key Managerial Personnel. Disassociation of our Directors or any failure to retain such key managerial personnel could have an adverse impact on our business, financial conditions and results of operations.

We depend heavily on our Directors and the Key Managerial Personnel to implement our business strategy and carry out our operations. If our Directors disassociate or any of our key managerial personnel resign or discontinue their services and are not adequately replaced, our business operations and the implementation of our business strategy could be materially and adversely affected.

18. Our revenues and profits are dependent on several factors. Any adverse change in these factors or in combination of these factors may affect our business operations and the financial condition and consequently, our ability to pay dividends.

Our revenues and profits are dependent on several factors such as retaining our key managerial personnel, our complying with laws, managing costs and expenses, maintaining adequate inventory levels and general market conditions. Any adverse change in these factors or a combination of these factors may adversely affect our business operations and the financial condition. Further, our ability to pay dividends will depend upon our future earnings, financial condition, cash flows, working capital requirements, capital expenditures, lender's approvals and other factors. Therefore, although, we have consistently maintained the profit levels and reserves, there can be no assurance that we shall have distributable funds or that we will declare dividends.

19. If we are not able to obtain, renew or maintain our statutory and regulatory registrations and approvals required to operate our business, it may have a material adverse effect on our business.

We require certain statutory and regulatory registrations and approvals to operate our business. While, save and except as stated below, we believe we have procured all the necessary licenses/registrations/approvals, there cannot be any assurance that the same are adequate for legal compliance or that we have complied with all the applicable laws. In the future, we will be required to renew such registrations and approvals and obtain new registrations and approvals for any proposed operations, including any expansion of existing operations.

Our licence to run a factory under Factories Act, 1948 and Industrial Safety & Health Gujarat State has expired and we have made an application for renewal of the same. Further, our registration as a Micro Small and Medium Enterprise has expired and we are in the process of making an application for renewal of the same.

While we believe that we will be able to renew or obtain such registrations and approvals as and when required, there can be no assurance that the relevant authorities will renew or issue any such registrations or approvals in the time-frame anticipated by us or at all. If we are unable to renew, maintain or obtain the required registrations or approvals, it may result in the interruption of our operations and may have a material adverse effect on our revenues and operations.

20. Our loan agreements with lenders have several restrictive covenants and certain unconditional rights in favour of the lender, which could influence our ability to expand, in turn affecting our business and results of operations.

As on 31st March, 2015, we have availed of Rs. 995.00 lacs as cash credit and term loan facilities from Kotak Mahindra Bank Limited. The said loan has been secured by way of mortgage of immovable property owned by our Company, our Promoter, corporate guarantee of our Promoter and personal guarantee of our Directors. In case we are not able to pay our dues in time, the same could adversely impact our operations. Further, in event of default on the debt obligations, the security or personal guarantees may be invoked thereby adversely affecting the ability of our Promoters and Directors to manage the affairs of our Company and consequently impact our business, prospects, financial condition and results of operations. Any failure to comply with any requirement or other condition or covenant under our financing agreements, may lead to a termination of our credit facilities, acceleration of all amounts due under the said credit facility and may adversely affect our ability to conduct our business and operations or implement our business plans. Further, the said credit facilities can be renewed/enhanced/cancelled/suspended/reduced and the terms and conditions of the same can be altered by the lender, at its discretion. In the event the lender refuses to renew/enhance the credit facilities and/or cancels/suspends/reduces the said credit facilities and/or alters the terms and conditions to the derogation of our Company, our existing operations as well as proposed expansion may be severely affected. Consequently, it would have a bearing on the financial condition of the Company.

21. Excessive dependence on the Kotak Mahindra Bank in respect of obtaining financial facilities.

Our major fund based and non fund based financial assistance has been sanctioned by the bank, i.e. the Kotak Mahindra Bank on the security of assets. The Company is dependent on Kotak Mahindra Bank for its Working Capital requirement and any default under such arrangement with such lender may create problem for operation of the Company, which may affect the financial stability of the Company. At the same time this may result into difficulty in arranging for funds for repayment and may also adversely affect the financial position of the Company.

Further, the estimates of our working capital requirement are based on the experience of our management and Promoters. However, it cannot be assured that these estimates may be accurate. We may require more working capital in which case, we may be required to raise additional debt, on terms that may not be totally favourable to our Company, which may in turn adversely affect our profitability.

RISKS RELATING TO EQUITY SHARES

44. Any future issuance of Equity Shares may dilute your shareholding and sales of our Equity Shares by our Promoter or other major shareholders may adversely affect the trading price of the Equity Shares.

Any future equity issuances by us, including in a primary offering, may lead to the dilution of investors' shareholdings in our Company. Any future equity issuances by us or sales of our Equity Shares by our Promoter or other major shareholders may adversely affect the trading price of the Equity Shares. In addition, any perception by investors that such issuances or sales might occur could also affect the trading price of our Equity Shares.

45. There is no existing market for our Equity Shares and we cannot assure you that such a market will develop. The stock price may be volatile, and you may be unable to resell your shares at or above the Issue price or at all.

Prior to this Issue, there has been no public market for our Equity Shares, and an active trading market may not develop or be sustained upon the completion of this Issue. The Issue Price of the Equity Shares offered hereby may not be indicative of the market price of the Equity Shares after this Issue. The market price of our Equity Shares after this Issue will be subject to significant fluctuations in response to among other factors:

- variations in our operating results and the performance of our business;
- regulatory developments in our target markets affecting us, our customers or our competitors;
- changes in financial estimates by securities research analysts;
- loss of key employees;
- loss of one or more significant customers;
- the performance of the Indian and global economy;
- significant developments in India's economic liberalization and deregulation policies, and the fiscal regime; and
- volatility in the Indian and global securities markets.

Even though a Market Maker has been appointed for our stock, since there has been no public market for our Company's Equity Shares, an active trading market on the Indian Stock Exchanges may not develop or be sustained after the Issue. The Issue Price of the Equity Shares may bear no relationship to the market price of the Equity Shares after the Issue. The market price of the Equity Shares after the Issue may be subject to significant fluctuations in response to, among other factors, variations in our Company's operating results, market conditions specific to the packaging sector in India, developments relating to India and volatility in the BSE and the NSE and securities markets elsewhere in the world. The risk of loss associated with this characteristic may be greater for investors expecting to sell Equity Shares purchased in this Issue soon after the Issue.

46. The Issue price of our Equity Shares may not be indicative of the market price of our Equity Shares after the Issue and the market price of our Equity Shares may decline below the Issue Price and you may not be able to sell your Equity Shares at or above the Issue Price.

The Issue Price of our Equity Shares has been determined by the management and the lead managers on numerous factors and may not be indicative of the market price of our Equity Shares after the Issue. For further information please refer the section titled "**Basis for Issue Price**" beginning on page 61 of this Prospectus. The market price of our Equity Shares could be subject to significant fluctuations after the Issue, and may decline below the Issue Price. We cannot assure you that you will be able to sell your Equity Shares at or above the Issue Price. Amongst the factors that could affect our share price are:

- Quarterly variations in the rate of growth of our financial indicators, such as earnings per share, net income and revenues;
- Changes in revenue or earnings estimates or publication of research reports by analysts;
- Speculation in the press or investment community;
- General market conditions; and
- Changes in economic, legal and regulatory factors (both domestic and international) unrelated to our performance such as global recession, imposition of trade / non trade barriers and sanctions etc.

47. *There is no guarantee that the Equity Shares issued pursuant to the Issue will be listed on the SME Platform of BSE in a timely manner, or at all.*

In accordance with Indian law and practice, permission for listing and trading of the Equity Shares issued pursuant to the Issue will not be granted until after the Equity Shares have been issued and allotted. Approval for listing and trading will require all relevant documents authorizing the issuing of Equity Shares to be submitted. There could be a failure or delay in listing the Equity Shares on the SME Platform of BSE. Any failure or delay in obtaining the approval would restrict your ability to dispose of your Equity Shares.

48. *You may be subject to Indian taxes arising out of capital gains on the sale of the Equity Shares.*

Capital gains arising from the sale of shares and debentures are generally taxable in India. Any gain realised on the sale of shares and debentures on a stock exchange held for more than 12 months will not be subject to capital gains tax in India if the securities transaction tax, or STT, has been paid on the transaction. The STT will be levied on and collected by an Indian stock exchange on which shares or debentures are sold. Any gain realised on the sale of shares and/or held for more than 12 months to an Indian resident, which are sold other than on a recognised stock exchange and as a result of which no STT has been paid, will be subject to capital gains tax in India. Further, any gain realised on the sale of shares and/or debentures held for a period of 12 months or less will be subject to capital gains tax in India. Capital gains arising from the sale of shares and/or debentures will be exempt from taxation in India in cases where an exemption is provided under a treaty between India and the country of which the seller is a resident. Generally, Indian tax treaties do not limit India's ability to impose tax on capital gains. As a result, residents of other countries may be liable for tax in India as well as in their own jurisdictions on gains arising from a sale of the shares and/or debentures, as the case may be.

49. *Any future issuance of Equity Shares may dilute the shareholding of the Investor and sales of our Equity Shares by our Promoter or other major shareholders and dilution in net tangible book value may adversely affect the trading price of Equity Shares.*

Any future issuance of our Equity Shares by our Company could dilute the shareholding of the investor. Any such future issuance of our Equity Shares or sales of our Equity Shares by any of our significant shareholders may also adversely affect the trading price of our Equity Shares and could impact our ability to raise capital through an offering of our securities. While the entire Post-Issue paid-up share capital held by our Promoters and other shareholders will be locked-in for a period of 1 (one) year and 20% of our post-Issue paid-up capital held by our Promoter will be locked-in for a period of 3 (three) years from the date of allotment of Equity Shares in the Issue, upon listing of our Equity Shares on the Stock Exchanges. In addition, any perception by investors that such issuances or sales might occur could also affect the trading price of our Equity Shares. For further information relating to such Equity Shares that will be locked-in, please refer to the sub-section titled "Notes to the Capital Structure" under the section titled "*Capital Structure*" beginning on page 42 of this Prospectus.

EXTERNAL RISKS

50. *The Companies Act, 2013 has introduced significant changes to the existing Indian company law framework and the SEBI has introduced changes to the Listing Agreement, which are effective from October 1, 2014, which may subject us to greater compliance requirements and increase our compliance costs.*

A majority of the provisions and rules under the Companies Act, 2013 have recently been notified and have come into effect from the date of their respective notification, resulting in the corresponding provisions of the Companies Act, 1956 ceasing to have effect. The Companies Act, 2013 has brought into effect significant changes to the Indian company law framework, such as in the provisions related to issue of capital (including provisions in relation to issue of securities on a private placement basis), disclosures in offer document, corporate governance norms, accounting policies and audit matters, related party transactions, introduction of a provision allowing the initiation of class action suits in India against companies by shareholders or depositors, a restriction on investment by an Indian company through more than two layers of subsidiary investment companies (subject to certain permitted exceptions), prohibitions on loans to directors, insider trading and restrictions on directors and key managerial personnel from engaging in forward dealing. We may also need to spend, in each financial year, at least 2.0% of our average net profits during the three immediately preceding financial years towards corporate social responsibility activities. Further, the Companies Act, 2013 imposes greater monetary and other liability on our Company and Directors for any non-compliance. To ensure compliance with the requirements of the Companies Act, 2013, we may need to allocate additional resources, which may increase our regulatory compliance costs and divert management attention.

The Companies Act, 2013 has introduced certain additional requirements which do not have corresponding equivalents

under the Companies Act, 1956. Accordingly, we may face challenges in interpreting and complying with such provisions due to limited jurisprudence on them. In the event, our interpretation of such provisions of the Companies Act, 2013 differs from or contradicts with, any judicial pronouncements or clarifications issued by the government in the future, we may face regulatory actions or we may be required to undertake remedial steps. Additionally, some of the provisions of the Companies Act, 2013 overlap with other existing laws and regulations (such as the corporate governance norms and insider trading regulations issued by SEBI). Recently, SEBI issued revised corporate governance guidelines which are effective from October 1, 2014. Pursuant to the revised guidelines, we are required to, *inter alia*, establish a vigilance mechanism for directors and employees and reconstitute certain committees in accordance with the revised guidelines. We may face difficulties in complying with any such overlapping requirements. Any increase in our compliance requirements or in our compliance costs may have an adverse effect on our business and results of operations.

51. Political instability or changes in the Government in India or in the government of the states where we operate could cause us significant adverse effects.

We are incorporated in India and all of our operations, assets and personnel are located in India. Consequently, our performance and the market price and liquidity of our Equity Shares may be affected by changes in exchange rates and controls, interest rates, government policies, taxation, social and ethnic instability and other political and economic developments affecting India. The central government has traditionally exercised, and continues to exercise, a significant influence over many aspects of the economy. Our businesses, and the market price and liquidity of our Equity Shares may be affected by interest rates, changes in central government policy, taxation, social and civil unrest and other political, economic or other developments in or affecting India. Since 1991, successive central governments have pursued policies of economic liberalization and financial sector reforms. However, there can be no assurance that such policies will be continued. A significant change in the central government's policies, in particular, those relating to the banking and finance industry in India, could adversely affect our business, financial condition and results of operations and could cause the price of our Equity Shares to decline.

52. Global economic downturn and adverse market conditions could cause our business to suffer. A slowdown in economic growth in India could cause our business to suffer

The developed economies of the world viz. U.S., Europe, Japan and others are in midst of a downturn affecting their economic condition and markets general business and consumer sentiment has been adversely affected due to the global slowdown and there can be no assurance whether the developed economies or the emerging market economies will see good economic growth in the near future. Consequently, this has also affected the global stock and commodity markets. Our performance and growth is directly related to the performance of the Indian economy. The performance of the Indian economy is dependent among other things on the interest rate, political and regulatory actions, liberalization policies, commodity and energy prices etc. A change in any of the factors would affect the growth prospects of the Indian economy, which may in turn adversely impact our results of operations, and consequently the price of our Equity Shares.

53. Any downgrading of India's debt rating by an independent agency may harm our ability to raise debt financing.

Any adverse revisions to India's credit ratings for domestic and international debt by international rating agencies may adversely affect our ability to raise additional financing and the interest rates and other commercial terms at which such additional financing is available. This could have a material adverse effect on our capital expenditure plans, business and financial performance.

54. If communal disturbances or riots erupt in India, or if regional hostilities increase, this would adversely affect the Indian economy and our business

Some parts of India have experienced communal disturbances, terrorist attacks and riots during recent years. If such events recur, our operational and marketing activities may be adversely affected, resulting in a decline in our income. The Asian region has, from time to time, experienced instances of civil unrest and hostilities among neighbouring countries. Since May 1999, military confrontations between countries have occurred in Kashmir. The hostilities between India and its neighbouring countries are particularly threatening because India and certain of its neighbours possess nuclear weapons. Hostilities and tensions may occur in the future and on a wider scale. Also, since 2003, there have been military hostilities and continuing civil unrest and instability in Afghanistan. There has also recently been hostility in the Korean Peninsula. In July 2006 and November 2008, terrorist attacks in Mumbai resulted in numerous casualties. Events of this nature in the future, as well as social and civil unrest within other countries in Asia, could influence the Indian economy and could have a material adverse effect on the market for securities of Indian companies, including our Equity Shares.

55. Future sales of our Equity Shares may negatively affect our Equity Shares

Future sales of substantial amounts of our Equity Shares in the public market, or even the potential for such sales, could adversely affect the price of our Equity Shares and could impair our ability to raise capital. All of the shares sold in this offering, will be freely tradable without restriction. The Equity Shares owned by our Promoters and other shareholders are subject to lock-in as detailed under the section titled "**Capital Structure**" beginning on page 42 of this Prospectus. We cannot assure you that they will retain ownership of our Equity Shares after the lock-in period following this offering. Sales or distributions by our Promoters or other shareholders of substantial amounts of our Equity Shares in the public market could adversely affect prevailing market prices for our Equity Shares.

SECTION III – INTRODUCTION

SUMMARY OF INDUSTRY

This is only a summary and does not contain all the information that you should consider before investing in our Equity Shares. You should read the entire Prospectus, including the information contained in the chapter titled “Risk Factors” and “Restated Financial Statements” and related notes beginning on page 11 and 125 of this Prospectus before deciding to invest in our Equity Shares.

Bearings, also known as anti-friction components have their applications in automobiles, pumps, gearboxes, heavy earth-moving equipment and industrial sectors. The growth of the bearings industry, which caters mostly to the requirement of replacement market, is directly correlated with the automotive and industrial sectors. Though automotive sector in India accounts for the largest share in demand of bearings in the Indian market, Industrial bearings market is far more widespread. It is spread over every segment of the Industry. As every movement, rotating or linear requires support of bearings prearrangement, the applications and varieties of bearing products is enormous, which not only widens to a huge size range with variations, but calls for a special variety of products such as: Slewing Rings, Track Rollers, Rod Ends, Spherical Plain, Cam followers, Linear motion system, Re-circulating bearings, Ball bushings, Plain bearings and many more. Approximately, 70% bearings are used in industries other than automobiles. In India, Industrial Bearings are manufactured by few players mostly it is imported from Europe, Japan and other countries. As the infrastructure develops, the Bearing Industry has got the opportunity to grow up. The Indian bearing market accounts for less than 5% of the world bearing market. The players in that market include international manufacturers and numerous local manufacturers such as NEI, NRB, ABC and TATA. A noteworthy proportion of bearings are imported from countries like Germany, Japan, China, Singapore, Sweden, France and Italy.

Global Economic Overview

Global growth is projected to reach 3.5 percent and 3.8 percent in 2015 and 2016 global. Specifically, the recovery in the United States was stronger than expected, averaging about 4 percent annualized in the last three quarters of 2014. Consumption—the main engine of growth—has benefited from steady job creation and income growth, lower oil prices, and improved consumer confidence. The unemployment rate declined to 5.5 percent in February, more than 1 percentage point below its level of a year ago. Growth is projected to be stronger in 2015 relative to 2014 in advanced economies, but weaker in emerging markets, reflecting more subdued prospects for some large emerging market economies and oil exporter. Economic performance in Russia was a bit stronger than expected in the second half of 2014, but the increase in geopolitical tensions, declining confidence, and the repercussions of the oil price decline point to a more severe weakening of the outlook in the Commonwealth of Independent States (CIS) as a whole at the start of the year.

IMF said that India is among the few major economies with a strong growth outlook. Growth in India has picked up, even as the world economy is faced with subdued demand conditions, particularly in Europe and Japan, and recent slowdown in China. IMF estimates that GDP growth in India this fiscal will be 7.2 to 7.4 per cent.

Indian Economic Overview

The growth at market prices for 2015-16 is expected to be 8.1-to 8.5 per cent. The growth rate in GDP at constant (2011-12) market prices in 2012-13 was 5.1 per cent, which increased to 6.9 percent in 2013-14 and it is expected to further increase to 7.4 per cent in 2014-15 (According to advanced estimates). (Source: Press Information Bureau, Government of India, Press note dated February 27, 2015). In the coming year, real GDP growth at market prices is estimated to be about 0.6-1.1 percentage points higher vis-a-vis 2014-15. This increase is warranted by four factors. First, the government has undertaken a number of reforms and is planning several more. Their cumulative growth impact will be positive. A further impetus to growth will be provided by declining oil prices and increasing monetary easing facilitated by ongoing moderation in inflation. Simulating the effects of tax cuts, declining oil prices will add spending power to households, thereby boosting consumption and growth. Oil is also a significant input in production, and declining prices will shore up profit margins and hence balance sheets of the corporate sector. Declining input costs are reflected in the wholesale price index which moved to deflation territory in January 2015.

The RBI has also reduced the cash reserve ratio (“CRR”) of scheduled banks by 25 basis points from 4.25% to 4.0% of their net demand and time liabilities (“NDTL”) effective the fortnight beginning February 9, 2013. As a result of this reduction in the CRR, around Rs. 180,000 million of primary liquidity is expected to be injected into the banking system. *(Source: Third Quarter Review of Monetary Policy 2012-13; RBI Press Release dated January 29, 2013)*

The Ministry of Statistics and Programme Implementation, Government of India has revised the base year for estimating national income and has released new series of national accounts. As per international practices Gross Value Added (GVA) at basic prices in place of GDP at factor cost and GDP at Market prices will be referred to as GDP. As per the advance estimates of National Income, 2014-15, the Growth in GDP at constant prices (2011-12) during 2014-15 is estimated at 7.4 per cent as compared to the growth rate of 6.9 per cent in 2013-14. Agriculture sector’s growth has been estimated at 1.1 per cent in 2014-15 as against 3.7 per cent in 2013-14. Manufacturing and Services sector are estimated to grow at 6.8 per cent and 10 per cent, respectively in 2014-15.

As per quarterly estimates of GDP for Q3 of 2014-15 as per the new series, GDP growth was registered at 7.5 per cent. According to data released as per the earlier estimates, GDP growth stood at 5.7 per cent and 5.3 per cent during Q1 and Q2, respectively. Organization for Economic Cooperation and Development (OECD) has estimated that India’s GDP is expected to accelerate to 5.4 per cent in the year 2014-15 and 6.6 per cent for the year 2015-16.

India’s fiscal deficit during the 2013-14 was recorded at 4.5 percent of GDP. In the Union Budget 2014-15, the Government has targeted to bring down the fiscal deficit to 4.1 per cent of GDP for FY 2014-15. India’s fiscal deficit, during April-December, stood at 100.2 per cent of the full-year target.

Global Bearing (Ball Bearings Roller Bearings) Market

Bearings are machine elements that are primarily used for reducing friction between moving parts. Instrumented bearings are integrated with sensor units for measuring angular position of the rotatable ring with respect to the fixed ring of the bearing. The information collected through these sensors are used in various applications such as anti lock braking system, adaptive cruise control, tire pressure monitoring system and other industrial sectors.

The global instrumented bearing market is expected to witness substantial growth during the forecast period. This is due to the increasing demand of bearings across various application sectors such as automotive, defense and aerospace and industrial sector. The increase in automobile production globally is stimulating the growth in demand for instrumented bearings and associated components.

Factors such as rising demand from defense and aerospace industries and need for energy efficient solutions in various industries is also expected to influence the market growth. Aerospace equipment requires specialized bearings that are used for mission critical applications. These bearings need to be monitored very closely in order to ensure zero error operability.

Increasing need for energy efficiency in process industries is expected to drive the global bearings market over the forecast period. Technological advancements and surging demand across several end-use industries such as oil & gas, construction, machinery, automotive etc are witnessing progression in functionalities, thereby driving the bearings market growth. Rapid industrialization and infrastructure development in the Asia Pacific and Middle East regions also offers avenues for market growth. The bearings market has evolved significantly owing to the development of new materials, lubricant and searching for alternative uses for bearings.

The industry manufactures roller and ball bearings, which are small machine components that constrain motion and reduce friction between moving parts of several equipments. Bearings market demand is highly responsive to the price of steel, which is a key input to manufacturing, and influences the price operators charge for their products. Over the last few years, moderate demand and volatile steel prices has negatively impacted market growth. However, the bearings market is expected to witness slow growth owing to import penetration and increasing competition for key export markets.

Roller bearings are components used to reduce or eliminate friction between moving parts and thus reduce wear & tear of machines. They help improve machine performance and are thus a critical component of any equipment that rotates. It finds varied application, ranging from simple electric fans to complex space rockets. Depending on its usage, a bearing may have to withstand prolonged use, high-speed rotation, varied temperatures, or a corrosive environment. Bearings are available in two distinctive shapes, ball, and roller. There are four different types of roller bearings – cylindrical roller bearings, needle roller bearings, tapered roller bearings and spherical roller bearings

The bearings industry is highly fragmented. The organised sector caters to both the original equipment manufacturers and replacement market. The unorganised sector, which manufactures low quality small bearings, caters to the replacement market. The manufacturing activity of a few small-scale units is restricted to assembly of imported components. The automobile industry is the major user industry for the bearings industry. Given the growing demand for automobiles in the country, demand for bearings would increase in the coming years

Indian Bearing Markets

The US\$ 3.75 billion Indian auto ancillaries and components industry has established itself as a major player in both the domestic and international markets. A major feature of the auto ancillary industry is its high degree of export orientation - exports had grown from US\$ 330 million in 1997-98 to US\$ 800 million in 2002-03. Exports to US and Europe forms around 60 per cent of total component exports, followed by exports to Asian markets. India's presence in the international market is likely to grow further as global manufacturers leverage India's low-cost and highly skilled labour to reduce their cost of inputs. Several Government initiatives have helped the industry. The Auto Policy of 2002 removed earlier stipulations on indigenisation and import-balancing requirements and granted 'automatic' permission to foreign automobile manufacturers to set up wholly owned subsidiaries in India. This had strong multiplier effects for the components industry. In addition, the recent Government initiatives such as improvement in road infrastructure, better connectivity to ports, and faster clearance of export consignments have reduced the time taken in exports, thereby saving on working capital requirements. The Government has also reduced customs duties on raw materials required to manufacture components, making Indian components more cost-competitive. The duty regime is targeted to match the ASEAN levels in the near future.

The Indian Bearings Industry is well poised to achieve strong growth in coming years owing to rising domestic demand in the auto sector and in Industrial applications. Given the government of India's focus on the manufacturing sector, Indian Bearings Industry is expected to grow in the coming years. The government has already made clear its continuing focus on infrastructure from Power and Oil & Gas, Roads, Ports and Airports. As per the planning commission's estimates, the government has planned substantial investment in the 12th Five Year Plan aggregating USD 1 tn. This infrastructure spending will lead to growth in the manufacturing sector, which in turn will have a positive impact on bearings industry.

The Indian bearing industry has recorded healthy growth in the past few years. The Indian manufacturers are able to meet more than three-fourth of the demand for general purpose bearings. The Indian bearing industry's product range comprises of more than 500 types of bearings. Indian manufacturers do not produce special purpose bearings as demand for the same is low and investments required are huge as bearings is a capital intensive industry. Special purpose bearings are therefore imported.

Given decent extensive demand scenarios in the domestic market and with India evolving as a preferred low-cost sourcing destination, bearings manufacturers are likely to capitalise on the increasing production capacities and technological capabilities. Further, companies are likely to continue to diversify their product portfolio and de-risk their businesses. Though, competition is anticipated to increase and prices of raw material are likely to trail an upward movement. This is expected to exert pressure on the industry's profit margins. In such a scenario, cost control programmes would assume greater significance for the industry players, both big and small.

Roller bearings are essential components in the rotating parts of virtually all machines such as automobiles, electric motors, diesel engines, industrial machinery & machine tools, etc. Bearings are used in diversified fields. Hence, the product range is vast and diversified. The indigenous manufactures are manufacturing bearings of quality and precision at par with world renowned manufacturers. However, bearings for special applications, requiring high technology and /or required in low volumes are still being imported. There is considerable scope for development of bearings of smaller sizes and lighter weight with improved performance in harsh operating conditions like higher or low temperature. Automobile industry accounts for bulk of the total demand of this industry with estimated share of 35%, electrical industry share is 12%, after market (replacement) share is 40% and the remaining 13% consumption is by other industries.

The rapidly globalising world is opening new avenues for the transportation industry, generating the need for more efficient, safe and reliable modes of transportation, which is subsequently adding to the auto component industry's growing opportunities. According to a report by the Confederation of Indian Industry (CII), the Indian auto component industry is set to become the third largest in the world by 2025. Also, by that time, newer verticals and opportunities for component manufacturers will open up as the automobile market will shift towards electric, electronic and hybrid cars, and newer technologies will have to be adopted via systematic research and development. Indian auto component makers are well positioned to benefit from the globalisation of the sector as exports potential could be increased by up to four times to US\$ 40 billion by 2020.

Investments

The cumulative foreign direct investment (FDI) inflows into the Indian automobile industry during the period April 2000 – February 2015 were recorded at US\$ 12,232.06 million, as per data published by the Department of Industrial Policy and Promotion

Background

Bearings, also known as anti-friction components have their applications in automobiles, pumps, gearboxes, heavy earth-moving equipments and industrial sectors. The growth of the bearings industry, which caters mostly to the requirement of replacement market, is directly correlated with the automotive and industrial sectors. Though automotive sector in India accounts for the largest share in demand of bearings in the Indian market, Industrial bearings market is far more widespread. It is spread over every segment of the Industry. As every movement, rotating or linear requires support of bearings prearrangement, the applications and varieties of bearing products is enormous, which not only widens to a huge size range with variations, but calls for a special variety of products such as: Slewing Rings, Track Rollers, Rod Ends, Spherical Plain, Cam followers, Linear motion system, Re-circulating bearings, Ball bushings, Plain bearings and many more. Approximately, 70% bearings are used in industries other than automobiles. In India, Industrial Bearings are manufactured by few players mostly it is imported from Europe, Japan and other countries. As the infrastructure develops, the Bearing Industry has got the opportunity to grow up. The Indian bearing market accounts for less than 5% of the world bearing market. The players in that market include international manufacturers and numerous local manufacturers such as NEI, NRB, ABC and TATA. A noteworthy proportion of bearings are imported from countries like Germany, Japan, China, Singapore, Sweden, France and Italy.

Global Economic Overview

Global growth is projected to reach 3.5 percent and 3.8 percent in 2015 and 2016 global. Specifically, the recovery in the United States was stronger than expected, averaging about 4 percent annualized in the last three quarters of 2014. Consumption—the main engine of growth—has benefited from steady job creation and income growth, lower oil prices, and improved consumer confidence. The unemployment rate declined to 5.5 percent in February, more than 1 percentage point below its level of a year ago. Growth is projected to be stronger in 2015 relative to 2014 in advanced economies, but weaker in emerging markets, reflecting more subdued prospects for some large emerging market economies and oil exporter. Economic performance in Russia was a bit stronger than expected in the second half of 2014, but the increase in geopolitical tensions, declining confidence, and the repercussions of the oil price decline point to a more severe weakening of the outlook in the Commonwealth of Independent States (CIS) as a whole at the start of the year.

Indian Economic Overview

The growth at market prices for 2015-16 is expected to be 8.1-to 8.5 per cent. The growth rate in GDP at constant (2011-12) market prices in 2012-13 was 5.1 per cent, which increased to 6.9 percent in 2013-14 and it is expected to further increase to 7.4 per cent in 2014-15 (According to advanced estimates). (Source: Press Information Bureau, Government of India, Press note dated February 27, 2015). In the coming year, real GDP growth at market prices is estimated to be about 0.6-1.1 percentage points higher vis-a-vis 2014-15. This increase is warranted by four factors. First, the government has undertaken a number of reforms and is planning several more. Their cumulative growth impact will be positive. A further impetus to growth will be provided by declining oil prices and increasing monetary easing facilitated by ongoing moderation in inflation. Simulating the effects of tax cuts, declining oil prices will add spending power to households, thereby boosting consumption and growth. Oil is also a significant input in production, and declining prices will shore up profit margins and hence balance sheets of the corporate sector. Declining input costs are reflected in the wholesale price index which moved to deflation territory in January 2015.

Global Bearing (Ball Bearings Roller Bearings) Market

Bearings are machine elements that are primarily used for reducing friction between moving parts. Instrumented bearings are integrated with sensor units for measuring angular position of the rotatable ring with respect to the fixed ring of the bearing. The information collected through these sensors are used in various applications such as anti lock braking system, adaptive cruise control, tire pressure monitoring system and other industrial sectors.

The global instrumented bearing market is expected to witness substantial growth during the forecast period. This is due to the increasing demand of bearings across various application sectors such as automotive, defense and aerospace and industrial sector. The increase in automobile production globally is stimulating the growth in demand for instrumented bearings and associated components.

Factors such as rising demand from defense and aerospace industries and need for energy efficient solutions in various industries is also expected to influence the market growth. Aerospace equipment requires specialized bearings that are used for mission critical applications. These bearings need to be monitored very closely in order to ensure zero error operability.

Increasing need for energy efficiency in process industries is expected to drive the global bearings market over the forecast period. Technological advancements and surging demand across several end-use industries such as oil & gas, construction, machinery, automotive etc are witnessing progression in functionalities, thereby driving the bearings market growth. Rapid industrialization and infrastructure development in the Asia Pacific and Middle East regions also offers avenues for market growth. The bearings market has evolved significantly owing to the development of new materials, lubricant and searching for alternative uses for bearings.

The industry manufactures roller and ball bearings, which are small machine components that constrain motion and reduce friction between moving parts of several equipments. Bearings market demand is highly responsive to the price of steel, which is a key input to manufacturing, and influences the price operators charge for their products. Over the last few years, moderate demand and volatile steel prices has negatively impacted market growth. However, the bearings market is expected to witness slow growth owing to import penetration and increasing competition for key export markets.

Roller bearings are components used to reduce or eliminate friction between moving parts and thus reduce wear & tear of machines. They help improve machine performance and are thus a critical component of any equipment that rotates. It finds varied application, ranging from simple electric fans to complex space rockets. Depending on its usage, a bearing may have to withstand prolonged use, high-speed rotation, varied temperatures, or a corrosive environment. Bearings are available in two distinctive shapes, ball, and roller. There are four different types of roller bearings – cylindrical roller bearings, needle roller bearings, tapered roller bearings and spherical roller bearings

The bearings industry is highly fragmented. The organised sector caters to both the original equipment manufacturers and replacement market. The unorganised sector, which manufactures low quality small bearings, caters to the replacement market. The manufacturing activity of a few small-scale units is restricted to assembly of imported components. The automobile industry is the major user industry for the bearings industry. Given the growing demand for automobiles in the country, demand for bearings would increase in the coming years

Indian Bearing Markets

The US\$ 3.75 billion Indian auto ancillaries and components industry has established itself as a major player in both the domestic and international markets. A major feature of the auto ancillary industry is its high degree of export orientation - exports had grown from US\$ 330 million in 1997-98 to US\$ 800 million in 2002-03. Exports to US and Europe forms around 60 per cent of total component exports, followed by exports to Asian markets. India's presence in the international market is likely to grow further as global manufacturers leverage India's low-cost and highly skilled labour to reduce their cost of inputs. Several Government initiatives have helped the industry. The Auto Policy of 2002 removed earlier stipulations on indigenisation and import-balancing requirements and granted 'automatic' permission to foreign automobile manufacturers to set up wholly owned subsidiaries in India. This had strong multiplier effects for the components industry. In addition, the recent Government initiatives such as improvement in road infrastructure, better connectivity to ports, and faster clearance of export consignments have reduced the time taken in exports, thereby saving on working capital requirements. The Government has also reduced customs duties on raw materials required to manufacture components, making Indian components more cost-competitive. The duty regime is targeted to match the ASEAN levels in the near future.

The Indian Bearings Industry is well poised to achieve strong growth in coming years owing to rising domestic demand in the auto sector and in Industrial applications. Given the government of India's focus on the manufacturing sector, Indian Bearings Industry is expected to grow in the coming years. The government has already made clear its continuing focus on infrastructure from Power and Oil & Gas, Roads, Ports and Airports. As per the planning commission's estimates, the government has planned substantial investment in the 12th Five Year Plan aggregating USD 1 tn. This infrastructure spending will lead to growth in the manufacturing sector, which in turn will have a positive impact on bearings industry.

The Indian bearing industry has recorded healthy growth in the past few years. The Indian manufacturers are able to meet more than three-fourth of the demand for general purpose bearings. The Indian bearing industry's product range comprises of more than 500 types of bearings. Indian manufacturers do not produce special purpose bearings as demand for the same is low and investments required are huge as bearings is a capital intensive industry. Special purpose bearings are therefore imported.

Given decent extensive demand scenarios in the domestic market and with India evolving as a preferred low-cost sourcing destination, bearings manufacturers are likely to capitalise on the increasing production capacities and technological capabilities. Further, companies are likely to continue to diversify their product portfolio and de-risk their businesses. Though, competition is anticipated to increase and prices of raw material are likely to trail an upward movement. This is expected to exert pressure on the industry's profit margins. In such a scenario, cost control programmes would assume greater significance for the industry players, both big and small.

Roller bearings are essential components in the rotating parts of virtually all machines such as automobiles, electric motors, diesel engines, industrial machinery & machine tools, etc. Bearings are used in diversified fields. Hence, the product range is vast and diversified. The indigenous manufacturers are manufacturing bearings of quality and precision at par with world renowned manufacturers. However, bearings for special applications, requiring high technology and /or required in low volumes are still being imported. There is considerable scope for development of bearings of smaller sizes and lighter weight with improved performance in harsh operating conditions like higher or low temperature. Automobile industry accounts for bulk of the total demand of this industry with estimated share of 35%, electrical industry share is 12%, after market (replacement) share is 40% and the remaining 13% consumption is by other industries.

The rapidly globalising world is opening new avenues for the transportation industry, generating the need for more efficient, safe and reliable modes of transportation, which is subsequently adding to the auto component industry's growing opportunities. According to a report by the Confederation of Indian Industry (CII), the Indian auto component industry is set to become the third largest in the world by 2025. Also, by that time, newer verticals and opportunities for component manufacturers will open up as the automobile market will shift towards electric, electronic and hybrid cars, and newer technologies will have to be adopted via systematic research and development. Indian auto component makers are well positioned to benefit from the globalisation of the sector as exports potential could be increased by up to four times to US\$ 40 billion by 2020.

Investments

The cumulative foreign direct investment (FDI) inflows into the Indian automobile industry during the period April 2000 – February 2015 were recorded at US\$ 12,232.06 million, as per data published by the Department of Industrial Policy and Promotion.

Types of Roller Bearing

Rolling bearings are comprised of four basic parts: an inner ring (race), an outer ring (race), rolling elements (balls and/or rollers) and a cage. The inner ring is the smaller of the two rings and has a groove on its outside diameter to form a path for the balls or rollers. It is mounted to the shaft and is usually the rotating element. The outer ring is the larger of the two rings and conversely has a groove on its inside diameter to form a pathway for the balls/rollers. It is normally placed in housing and is usually stationary. The rolling elements separate the inner and outer ring and permit the bearing to rotate smoothly with minimal friction. They carry the load and may be either balls, **tapered rollers, spherical rollers or cylindrical**

rollers. The cage separates the balls or rollers, guides them in the pathways during rotation and prevents them from falling out. It may be made of steel, brass, bronze, etc. depending on the type or application of the bearing. (http://www.cbp.gov/sites/default/files/documents/ballbearings_3.pdf)

TAPERED ROLLER BEARING

Taper roller bearings consist of an inner ring (cone), an outer ring (cup), a cage and rollers which are profiled to distribute the load evenly. They have high radial and axial (thrust) load capacities at low to intermediate speeds. Taper roller bearings are available in single-row, two-row and four-row designs. With single-row bearings, the thrust load capacity is about 60% of the radial capacity. Double-row bearings have a greater radial load capacity and can handle thrust loads in both directions. The rollers can be configured in such a way that the contact lines between the roller and the race converge or diverge towards the axis of rotation. Diverging double-row bearings increase the rigidity of the shaft mounting, while converging bearings do not. Other configurations for double-row bearings feature a single outer ring and two inner rings, or two outer rings and a single inner ring. Four-row tapered roller bearings consist of four rows of alternating converging and diverging rollers.

This type of bearings is designed so that the cups, cones and **rollers have tapered surfaces** whose apexes converge at a common point on the bearing axis. This type is suitable for applications involving heavy or impact loading.

CYLINDRICAL ROLLER BEARING

Cylindrical roller bearings are characterized by high radial and moderate thrust-load capacities. They contain **cylindrically-shaped roller**, which are nevertheless not true cylinders. Instead, they are crowned or end-relieved to reduce stress concentrations. This particular geometry results in low friction and allows high-speed applications. Cylindrical roller bearings feature high radial load capacity because the rollers and raceway are in linear contact. These bearings are suitable for applications that involve heavy radial and impact loading. They are also appropriate for high-speed applications inasmuch as they can be machined very accurately due to their structure. Having a separable inner or outer ring, these bearings can be easily mounted and dismounted.

Cylindrical roller bearings are used in a variety of applications. Examples include mining, petroleum production, power generation, power transmission, cement processing, aggregate crushing, and metal recycling. Some cylindrical roller bearings are used in briquetting machines, rubber mixing equipment, rolling mills, rotary dryers, or pulp and paper machinery. Others are used in construction equipment, crushers, electric motors, blowers and fans, gears and drives, plastics machinery, machine tools and traction motors and pumps.

SPHERICAL ROLLER BEARING

These types of bearings are self-aligning and feature a large load rating capacity. Therefore, spherical roller bearings are suitable for low/medium speed applications which involve heavy or impact loading. They come with cylindrical or tapered bores and can be supplied with adapter assemblies as well as withdrawal sleeves. Spherical roller bearings are available as double-row, combination radial and thrust bearings. They use a **spherical or crowned roller** as the rolling element. The race in the outer ring is spherical in shape, which allows for some misalignment of the shaft and the housing. Spherical

roller bearings are unequalled in their capacity for high loads and their tolerance to shock loads, but have limited speed capabilities. They perform consistently, even under extreme conditions, such as application-specific stress and marginal lubrication. The cage of a spherical roller bearing provides high dimensional accuracy and functionality. According to some estimates, spherical roller bearings have twice the running life of conventional bearings.

Make in India’ campaign augers well for the bearing sector

The government recently launched “Make in India” campaign to make India a manufacturing hub. As the “Make in India” story unfolds, the road ahead for the automobile industry is anxious. The Make in India story will definitely be crusaded by the automobile and manufacturing sector as it accounts for over ~30% of the entire IIP in India thereby affecting the requirements for bearings.

Key Government Policy

FDI and exemption from licensing: In the auto component sector, 100% foreign equity investment is allowed via automatic route. Additionally, the manufacturing and imports in this sector are exempt from licensing and approvals. This benefits the bearings industry as it propels demand.

R&D incentives for Industry: Weighed deduction of 200% is granted to assesseees for any sums paid to a national laboratory, university or institute of technology, or specified people with a specific direction and that the said sum is used for scientific research within a program approved by the prescribed authority.

For Manufacturing Facilities: Concessional excise duty of 6% extended to March 31, 2015 for manufacturers supplying batteries to producers of electrically operated vehicles.

State Incentives: Incentives are in areas like subsidised land cost, relaxation in stamp duty exemption on sale and lease of land, power tariff incentives, concessional rate of interest on loans, investment subsidies, tax incentives, backward areas

subsidies and special incentive packages for mega projects. This will boost manufacturing and translate into increased demand in the bearings sector.

Future Outlook

The Indian Bearings Industry is well poised to achieve strong growth in coming years owing to rising domestic demand in the auto sector and in Industrial applications. Product Portfolio:

The bearing makes many of the machines we use every day possible. Without bearings, we would be constantly replacing parts that wore out from friction. Bearings reduce friction by providing smooth metal rollers, and a smooth inner and outer metal surface for the balls to roll against. These rollers which is known as a heart of bearings "bear" the load, allowing the device to spin smoothly.

Taper roller bearings help in absorption of both radial and axial load combinations. For this reason, taper roller bearings are preferred solutions for reducing friction in applications such as wheels, gear boxes and power transmitting shafts. Our products are used by reputed bearing manufacturers and OEMs and then it is used by end-users in diverse industries such as rail, light vehicles, off-highway, heavy trucks and auto-aftermarket, industries classified as 'automobile industries', and

heavy industries, industrial processes, gear drives, energy and industrial distribution, as segments within the ‘process industries’.

The following table provides an overview of our product portfolio:

Marketing and Selling Arrangements:

Our products are sold through the following channels: 1) Domestic sales 2) Institutional: includes OEMs; and 3) Exports. Our products are sold principally by our own internal sales organizations

Our Manufacturing Process

Typically, taper roller manufacturing consists of the processes of forging, heat treatment, grinding, and assembly. The production process may be diagrammatically explained in the following manner:

Cold Forging (Heading): The initial process is a cold forging process (called 'heading') used to produce a near net shape. This equipment has the ability of transforming a wire into an intricately shaped part with tight and repetitive tolerances using a tooling progression.

Total Forging Capacity: 24 Pcs Million/Month (225 T / Month)

Drumming /Tumbling Process:

<p>Tumbling process gives the smooth edge formation; it removes the sharp cutting edge of cold heading process and gives roller a smooth end. Tumbling process is must to avoid grinding variation due to sharp edges.</p>

Heat Treatment:

All the components of the rollers are heated to provide resistance to inner and outer races which are hardened as per international standard. The hardness of the races as well as the rolling elements is further checked and tested using a hardness tester.

Grinding:

The grinding process itself is divided into two progressive phases “Rough and Finish”. In the first phase, the feed rate of the grinding wheel is positioned high to perform a kind of rough grinding operation in which efficient material removal is the goal. In the second phase, feed rate of the grinding wheel is reduced for a precision-finish grinding operation of the Rollers.

The Grinding process undergoes four stages namely:

Face Grinding:	In the face grinding process, duplex machine is used. Components are checked for size variations, flatness, roughness, parallelism and burning
OD Grinding:	In this material is checked for 2 point ovality, 3 point ovality, roundness and roughness.
Track Grinding:	In this stage of the grinding process the size of the track is checked with curvatures, taper, eccentric, roughness, 2 point ovality and 3 point ovality.
ID Grinding:	In this stage, an electronic measuring system known as marpos system is used to control size variation. The system checks for size precision in terms of ovality, roughness, roundness and other errors.

Thereafter, based on the specific customer requirements, the components are assembled with precision and excellence using fully automatic assembly line.

Infrastructure Facilities

Raw Materials and Components

The principal raw materials used by us to manufacture taper, cylindrical and spherical rollers are wire rods and alloy steel bars. We purchase most of our raw materials in required quantities from our supplier base. Our key suppliers are ASCOINDUSTRIES SAS France, Dongbu Special Steel Co. Limited and Overseas Alloy Steel etc.

The main utilities required in our activity are:

Power: The requirement of power for our operations is met through Paschim Gujarat Vij Company Limited where the plants.

In addition to above we have a wind mill by installing wind turbine generator and commissioned 0.250MW capacity by Shri Ram EPC Limited (the manufacturer of Wind Electric Generator), a company permitted by Gujarat Energy Development Agency (GEDA) at KotdaPitha in Amreli, Gujarat where turbine generators are used for generating wind energy for our captive use.

Fuel: The requirement of fuel for operating the machinery/equipment is met by supplies from local market.

Water: Water required for the manufacturing and allied process is procured through the existing water supply network in the plant premises.

Effluent Treatment

Our Company does not generate any industrial effluents which is hazardous to the environment.

Competition

Our Industry is fragmented consisting of large established players and small niche players. We compete with organized as well as unorganized sector on the basis of availability of product, product quality and product range. Further, there are no entry barriers in this industry and any expansion in capacity of existing manufacturers would further intensify competition. Industry is very competitive and we expect competition to continue and likely to increase in the future. Our principal competitors are Indian manufacturers, including Kansara Modular Limited, Star Balls & Rollers Limited and Macwell auto engineering Limited etc.

Capacity and Capacity Utilizations:

The installed capacity of the plant is 22,00,000 Kgs per annum i.e. Grinding Capacity for Cylindrical Rollers Grinding Capacity and Taper Rollers Grinding Capacity is 12 million Pcs/month each as certified by Chartered Engineer, J.R.Marvania, NO-M-145723-8 dated 15th June, 2015

The accounting policies have been consistently applied by the Company; and the accounting policies not referred to otherwise, are in conformity with Indian Generally Accepted Accounting Principles ('Indian GAAP').

The financial statements for the year ended 31st March, 2015 have been prepared in accordance with Schedule III of the Companies Act, 2013. Financial Statements for the year ended on 31 March 2014, 31 March 2013 and 31 March 2012 in accordance with Revised Schedule VI of the Companies Act, 1956 and for the year ended 31 March 2011 in accordance with pre-revised Schedule VI of the Companies Act, 1956. For the purpose of inclusion in the offer document, audited financial statements are prepared in accordance with Schedule III of the Companies Act, 2013. The adoption of Schedule III of the Companies Act, 2013 do not impact recognition and measurement principles followed for preparation of financial statements. However, for the financial year ended on 31 March 2011, adoption of Revised Schedule VI of the Companies Act, 1956 and then Schedule III of the Companies Act, 2013 has significant impact on presentation and disclosures made in the financial statements for these years.

The accounting policies have been consistently applied by the Company; and the accounting policies not referred to otherwise, are in conformity with Indian Generally Accepted Accounting Principles ('Indian GAAP'). The accounting policies adopted in the preparation of financial statements are consistent with those of previous year, except for the change in the accounting policy explained below:

Change in Accounting Policy

1. The company had not provided for gratuity for the years ended prior to 01.04.2014. The same was provided as on 31.03.2015 including for period ended on such date, on the basis of actuarial valuation. For the purpose of Restatement the figures for earlier years have been adjusted in the respective years.
2. Foreign exchange gain / (loss) on current assets and current liabilities outstanding at the balance sheet date prior to 01.04.2014 was not accounted by the company, however in restated financials, the same has been translated at the exchange rate prevailing on that date and the net gain or loss is recognized in the profit and loss account.

Use of estimates

The preparation of financial statements require estimates and assumptions to be made that affect the reported balances of assets as on the date of the financial statements and the reported amount of revenues and expenses during the reporting period. Accounting estimates could change from period to period. Actual results could differ from these estimates. Appropriate changes in estimates are made as and when the Management becomes aware of the changes in the circumstances surrounding the estimates. Changes in estimates are reflected in the financial statements in the period in which the changes are made and if material, their effects are disclosed in the notes to the financial statements.

Change in accounting estimate

Pursuant to Companies Act, 2013 being effective from 1 April 2014, the Company has revised the depreciation rates on fixed assets as per the useful life specified in Part 'C' of Schedule II of the Act.

The following significant accounting policies are adopted in the preparation and presentation of these financial statements:

1. Revenue recognition

Revenue is recognized to the extent that it is probable that the economic benefits will flow to the company and the revenue can be reliably measured.

Sales of Goods :

Sales are recognised when significant risks and rewards of ownership of goods have been passed to the buyer.

Power Generation Income :

Power generation income is recognised on the basis of electrical units generated and eligible for captive consumption or captive consumed or sold as shown in the power generation reports issued by the concerned authorities. Power generation income was booked as the per unit electricity rate, being paid by the company / actually sold by the company.

Interest :

Revenue is recognised on a time proportion basis taking into account the amount outstanding and the rate applicable.

Jobwork Income:

Revenue is recognised on the basis of completion of services being provided.

2. Tangible Fixed Assets

Gross fixed assets are stated at cost of acquisition including incidental expenses relating to acquisition and installation. Fixed Assets are stated at cost net of modvat / cenvat / other credits and includes amounts added on revaluation, less accumulated depreciation and impairment loss, if any. All pre-operative costs, including specific financing cost till commencement of commercial production, net charges on foreign exchange contracts and adjustment arising from foreign exchange rate variations attributable to the fixed assets are capitalised. Long-term leasehold assets are capitalized under fixed assets.

The carrying amounts of the assets belonging to each cash generating unit ('CGU') are reviewed at each balance sheet date to assess whether they are recorded in excess of their recoverable amounts and where carrying amounts exceed the recoverable amount of the asset's CGU, assets are written down to their recoverable amount. Recoverable amount is the greater of the asset's net selling price and value in use. In assessing value in use, the estimated future cash flows are discounted to their present value using a pre-tax discount rate that reflects current market assessments of the time value of money and risks specific to the asset. After impairment, depreciation is provided on the revised carrying

amount of the asset over its remaining useful life. The impairment loss recognised in prior accounting periods is reversed if there has been a change in estimates of recoverable amount. The carrying value after reversal is not increased beyond the carrying value that would have prevailed by charging usual depreciation if there was no impairment.

3. **Depreciation**

Depreciation on fixed assets is provided on Written Down Value (WDV) method at the rate and manner prescribed in schedule XIV of the Companies Act, 1956 up to the period ending on 31/03/2014. For the period 01/04/2014 to 31.12.2014, the depreciation on fixed assets is on Written Down Value (WDV) method at the rates arrived at on the basis of useful life / remaining useful life and in the manner as prescribed in, Part C, Schedule II of the Companies Act, 2013. In respect of assets whose useful life is already exhausted as on 1st April, 2014, Rs. 62151/- the carrying amount as on 1st April, 2014 after retaining the Scrap Value, has been adjusted in retained earnings under the head 'Reserves & Surplus'.

- (e) In case the total amount (i.e., original Bid Amount less discount (if applicable) plus additional payment) exceeds ` 200,000, the Bid may be considered for allocation under the Non-Institutional Category in terms of the RHP/Prospectus. 5.6 BASIS OF ALLOCATION

- (a) The SEBI ICDR Regulations, 2009 specify the allocation or Allotment that may be made to various categories of Bidders/Applicants in an Issue depending on compliance with the eligibility conditions. Certain details pertaining to the percentage of Issue size available for allocation to each category is disclosed overleaf of the Bid cum Application Form and in the RHP / Prospectus. For details in relation to allocation, the Bidder/Applicant may refer to the RHP / Prospectus.
- (b) Under-subscription in Retail category is allowed to be met with spill-over from any other category or combination of categories at the discretion of the Issuer and in consultation with the BRLMs and the Designated Stock Exchange and in accordance with the SEBI ICDR Regulations, 2009. Unsubscribed portion in QIB category is not available for subscription to other categories.
- (c) In case of under subscription in the Net Issue, spill-over to the extent of such under-subscription may be permitted from the Reserved Portion to the Net Issue. For allocation in the event of an under-subscription applicable to the Issuer, Bidders/Applicants may refer to the RHP.
- (d) **Illustration of the Book Building and Price Discovery Process**

Bidders should note that this example is solely for illustrative purposes and is not specific to the Issue; it also excludes bidding by Anchor Investors.

Bidders can bid at any price within the Price Band. For instance, assume a Price Band of ` 20 to ` 24 per share, Issue size of 3,000 Equity Shares and receipt of five Bids from Bidders, details of which are shown in the table below. The illustrative book given below shows the demand for the Equity Shares of the Issuer at various prices and is collated from Bids received from various investors.

Bid Quantity	Bid Amount (₹)	Cumulative Quantity	Subscription
500	24	500	16.67%
1,000	23	1,500	50.00%
1,500	22	3,000	100.00%
2,000	21	5,000	166.67%
2,500	20	7,500	250.00%

The price discovery is a function of demand at various prices. The highest price at which the Issuer is able to Issue the desired number of Equity Shares is the price at which the book cuts off, i.e., ₹ 22.00 in the above example. The Issuer, in consultation with the BRLMs, may finalise the Issue Price at or below such Cut-Off Price, i.e., at or below ₹ 22.00. All Bids at or above this Issue Price and cut-off Bids are valid Bids and are considered for allocation in the respective categories.

(e) **Alternate Method of Book Building**

In case of FPOs, Issuers may opt for an alternate method of Book Building in which only the Floor Price is specified for the purposes of bidding (“Alternate Book Building Process”).

The Issuer may specify the Floor Price in the RHP or advertise the Floor Price at least one Working Day prior to the Bid/Issue Opening Date. QIBs may Bid at a price higher than the Floor Price and the Allotment to the QIBs is made on a price priority basis. The Bidder with the highest Bid Amount is allotted the number of Equity Shares Bid for and then the second highest Bidder is Allotted Equity Shares and this process continues until all the Equity Shares have been allotted. RIIs, NIIs and Employees are Allotted Equity Shares at the Floor Price and allotment to these categories of Bidders is made proportionately. If the number of Equity Shares Bid for at a price is more than available quantity then the allotment may be done on a proportionate basis. Further, the Issuer may place a cap either in terms of number of specified securities or percentage of issued capital of the Issuer that may be allotted to a single Bidder, decide whether a Bidder be allowed to revise the bid upwards or downwards in terms of price and/or quantity and also decide whether a Bidder be allowed single or multiple bids.

SECTION 6: ISSUE PROCEDURE IN FIXED PRICE ISSUE

Applicants may note that there is no Bid cum Application Form in a Fixed Price Issue. As the Issue Price is mentioned in the Fixed Price Issue therefore on filing of the Prospectus with the RoC, the Application so submitted is considered as the application form.

Applicants may only use the specified Application Form for the purpose of making an Application in terms of the Prospectus which may be submitted through Syndicate Members/SCSB and/or Bankers to the Issue or Registered Broker.

ASBA Applicants may submit an Application Form either in physical form to the Syndicate Members or Registered Brokers or the Designated Branches of the SCSBs or in the electronic form to the SCSB or the Designated Branches of the SCSBs authorising blocking of funds that are available in the bank account specified in the Application Form only (“ASBA Account”). The Application Form is also made available on the websites of the Stock Exchanges at least one day prior to the Bid/Issue Opening Date.

In a fixed price Issue, allocation in the net offer to the public category is made as follows: minimum fifty per cent to Retail Individual Investors; and remaining to (i) individual investors other than Retail Individual Investors; and (ii) other Applicants including corporate bodies or institutions, irrespective of the number of specified securities applied for. The unsubscribed portion in either of the categories specified above may be allocated to the Applicants in the other category.

The Allotment to the RIIs will then be made in the following manner:

- (a) In the event the number of RIIs who have submitted valid Bids in the Issue is equal to or less than Maximum RII Allottees, (i) all such RIIs shall be Allotted the minimum Bid Lot; and (ii) the balance available Equity Shares, if any, remaining in the Retail Category shall be Allotted on a proportionate basis to the RIIs who have received Allotment as per (i) above for the balance demand of the Equity Shares Bid by them (i.e. who have Bid for more than the minimum Bid Lot).

In case the aggregate demand in this category is greater than the Non-Institutional Category at or above the Issue Price, allotment may be made on a proportionate basis up to a minimum of the Non-Institutional Category.

7.3 ALLOTMENT TO QIBs

For the Basis of Allotment to Anchor Investors, Bidders/Applicants may refer to the SEBI ICDR Regulations, 2009 or RHP / Prospectus. - (b) In the second instance, allotment to all QIBs may be determined as follows: (i) In the event of oversubscription in the QIB Category, all QIBs who have submitted Bids above the Issue Price may be Allotted Equity Shares on a proportionate basis for up to 95% of the QIB Category; (ii) Mutual Funds, who have received allocation as per (a) above, for less than the number of Equity Shares Bid for by them,

- (c) The number of Equity Shares to be Allotted to the successful Bidders may be arrived at on a proportionate basis, which is total number of Equity Shares applied for by each Bidder in that category multiplied by the inverse of the over-subscription ratio;
- (d) In all Bids where the proportionate allotment is less than the minimum bid lot decided per Bidder, the allotment may be made as follows: the successful Bidders out of the total Bidders for a category may be

- determined by a draw of lots in a manner such that the total number of Equity Shares Allotted in that category is equal to the number of Equity Shares calculated in accordance with (b) above; and each successful Bidder may be Allotted a minimum of such Equity Shares equal to the minimum Bid Lot finalised by the Issuer;

 - (f) If the Equity Shares allocated on a proportionate basis to any category are more than the Equity Shares Allotted to the Bidders in that category, the remaining Equity Shares available for allotment may be first adjusted against any other category, where the Allotted Equity Shares are not sufficient for proportionate allotment to the successful Bidders in that category. The Government usually updates the consolidated circular on FDI Policy once every Year and therefore, Circular 1 of 2014 will be valid until the DIPP issues an updated circular.

RBI has also issued Master Circular on Foreign Investment in India dated July 01, 2014 which is valid till June 30, 2015. In terms of the Master Circular, an Indian company may issue fresh shares to persons resident outside India (who are eligible to make investments in India, for which eligibility criteria are as prescribed). Such fresh issue of shares shall be subject to inter-alia, the pricing guidelines prescribed under the Master Circular. The Indian company making such fresh issue of shares would be subject to the reporting requirements, inter-alia with respect to consideration for issue of shares and also subject to making certain filings including filing of Form FC-GPR

Subscription by foreign investors (NRIs/FPIs)

FPIs are permitted to subscribe to Equity Shares of an Indian Company in a public offer without the prior approval of the RBI, so long as the price of the Equity Shares to be issued is not less than the price at which the Equity Shares are issued to residents. , SEBI registered FPIs have been permitted to purchase shares of an Indian company through offer, subject to total FPI investment being within the individual FPI/sub account investment limit of 10 per cent subject to the total sectoral cap of all FPIs/sub-accounts put together being 24 per cent of the paid-up capital of the Indian company.
